INTRODUCTION

This Annual Planning Information (API) Report for fiscal year 1984 is compiled primarily for use by socio-economic planners. It contains a wide range of information on the population, employment, occupations, and socio-economic characteristics of the state. The planning report differs this year from past reports in that data for areas (see Figure A) are included along with the statewide numbers. Data for Ada County (Boise City SMSA), which is Idaho's only Standard Metropolitan Statistical Area, are also included on many of the tables.

Description of Area

Idaho is located in the northwest United States. It is bordered by Washington, Oregon, Nevada, Utah, Wyoming, Montana and Canada. It is a sparsely populated state with a varied terrain of sagebrush, prairie and mountains. The Clearwater, Salmon, Lost River and Bitteroot Mountains are among the mountain ranges found inside the state's borders along with the Salmon, Clearwater and Snake Rivers. The rugged beauty of the land and the easy access to many outdoor activities such as boating, skiing, hunting and fishing have helped to make tourism and recreation a large and growing industry in the state.

Idaho has traditionally been an agricultural state but recent years have seen manufacturing, especially electronics, rapidly gaining importance. Livestock, cattle especially, is important to the economy. Major crops grown by Idaho's farmers include peas, alfalfa seed, Marion Kentucky Bluegrass seed, and "famous" potatoes. Major manufacturing industries include food processing, forest products, phosphate processing into fertilizer, and

electronics. Mining has played an important role in the development of the state with phosphate rock, silver, lead, and zinc among the resources being mined. Economic conditions of the last few years have caused a drastic reduction in the importance of mining to the state's economy. The forest products industry has also experienced a significant slowdown in recent years due to the poor economic climate.

Boise SMSA

There is only one Standard Metropolitan Statistical Area (SMSA) in Idaho which consists of all of Ada County. The Boise SMSA, located in the southwestern part of the state, has the largest population of any county in Idaho. Boise is the capital city of the state and is a center of activity for business and government. Like the rest of the state, Ada County has a mild climate and experiences four definite seasons during the year. Although the city itself is lush with trees and the Boise River, the surrounding area is naturally desert-like and farmers must rely heavily on irrigation to maintain their crops.

Highlights

The year 1982 was not a good year economically for Idaho, as well as for the rest of the nation. Continued high interest rates and low demand for Idaho's products had major effects throughout Idaho businesses, from lumber and mining, to agriculture. One industry that continues to be strong is the electronics industry which is relatively new to the state. Although the growth has been slow, and it is only a small part of the overall picture, the growth has never-the-less been there, which is welcome at a time when many businesses have been facing layoffs and closures.

There were signs that things were improving as 1982 ended and hopes for the elusive recovery have been renewed. As interest rates have eased, the construction industry is experiencing a slight improvement which also affects the lumber industry as well as others associated with construction. Predictions are that things should continue to improve although the length and depth of the national recession have caused long-term changes to the state's economy, and recovery will be very slow.

Because the economy is not improving at a rapid rate, the labor force is expected to be 432,400 statewide in 1984, which is less than one percent above the 432,033 in the 1980 labor force, but is 1.8 percent above the 1982 annual average labor force. However, the 1984 unemployment rate is projected to be 6.5 percent, while the preliminary 1982 annual rate was 8.8 percent.

There was a 32.5 percent increase in population from the 1970 census to the 1980 census, with a 6.3 percent increase over 1980 projected for 1984. The 1984 population is projected to be 1,003,023. Although Idaho experienced rapid growth in the 1970's which slowed considerably at the beginning of the 80's as the economy slowed, the state should experience a more rapid growth as the economy improves.

Population

The population projections in this report were developed by the Research and Analysis Bureau. Data from the 1980 census, survival rates from the Bureau of Labor Statistics, and Idaho birth rates were used in formulating these projections.

The population continues to increase although at a slower rate than the 70's. The state population is expected to be 1,003,023 in 1984 which is a 6.3 percent increase over the 1980 census.

A major element affecting Idaho's growth, the birth rate, continues to run well above the national average. According to the Bureau of Vital Statistics, the 1981 Idaho birth rate was 20.6 per 1,000 population. Idaho's fertility rate is 34.3 percent higher than the national rate. The estimated fertility rate in 1981 was 90.8 live births per 1,000 women 15-44 years in age. This is a decrease from 1980 when the fertility rate was 93.8 live births per 1,000 women.

Table 1 gives total population counts by county with area subtotals. Table 2 gives a detailed age breakout of the state population by sex while Table 3 provides age and sex breakdown by area for the 16 and over population. The 1980 census gives the median age of the Idaho population at 27.6 years; for males it was 27.0 years and for females 28.1 years. In the 1980 census, females comprised 50.1 percent of the population. This has not changed from the 1970 census. Table 4 lists persons by race by county.

The nonwhite population increased during the ten years from the 1970 to the 1980 census. American Indians increased from 0.94 percent of the total population in 1970 to 1.11 percent in 1980. The Other category grew from 0.69 percent to 3.08 percent in 1980. This increase may be partly due to differences in collecting data from 1970 to 1980.

In 1970, the Census Bureau classified Hispanic persons in Idaho on the basis of a 15 percent sample question regarding Spanish language. Those persons were counted as White. In 1980, on the survey forms sent to everyone, the determination of Spanish/Hispanic origin was made by the person filling out the census form.

The Census Bureau does not treat Spanish/Hispanic origin as a racial category; that is, although persons may be listed in this classification, they will also be found in a racial category such as White or Black. In 1980, persons listing themselves as Hispanic many times also marked the Other category for race. This would account for some of the increase of Other from 0.69 percent to 3.08 percent.

The Hispanic population increased from 2.59 percent of the total in 1970 to 3.88 percent in 1980. Because of the differences in data collection, these two years are not strictly comparable. The 1980 census is probably a more accurate representation of this group of people although the classification still remains a subjective judgement.

*The Spanish/Hispanic count is an ethnic rather than a race classification. This fits into the major race categories and should not be added to the race groups to obtain data for all persons in a minority group.

Labor Force and Employment Status

To be considered in the labor force, a person must be 16 years old or older and employed or, unemployed and looking for work. The term "Civilian Labor Force" excludes members of the Armed Forces. The Department of Employment deals primarily with the Civilian Labor Force.

The labor force is projected to be 432,400 in 1984 which is less than one percent above the 432,033 people in the 1980 labor force. Tables 5 and 6 give the labor force and unemployed projections for FY 1984 by age and sex for state, areas, and Ada County.

Table 13 provides labor force and education data for persons 16 to 19 years old by county. Numbers are given for the unemployed who were school drop-outs and for those not in the labor force who were school drop-outs based on 1980 census data. Table 14 gives the 1982 preliminary annual average labor force data by county.

The total number of unemployed in Idaho for 1980 was 28,283, while the number projected for 1980 is 28,000. The unemployment rate shows the relationship of the unemployed to the labor force as a whole. The 1984 projected unemployment rate for Idaho is 6.5 in anticipation of an improving economy. Tables 17 and 18 provide unemployment rates by age and sex for the state, areas, and Ada County. The highest unemployment rate is for youth. Young people are new to the labor market and many are inexperienced workers. Many times they will have several jobs before settling down to permanent employment.

The data on Table 15 give the numbers of unemployed by sex and race for the state. The following table gives unemployed persons by race for areas. Because detailed race data from the 1980 census are not available for all counties of all areas, the subtotal "Nonwhite" was used. Also included are tables with data from the Current Population Survey (CPS) giving various characteristics of the unemployed.

Occupational Information

Employment in Idaho (Table 23) lists monthly covered employment by industry for each county for 1981. This information is compiled by the Department of Employment on a quarterly and annual basis. This is also published periodically in the Department of Employment publication, "Basic Economic Data for Idaho". Table 24 gives 1980 census information on class of worker by county. This is followed by three tables of 1980 census occupational information. Table 25 gives a detailed breakout of occupations by area and Table 26 gives this same information by county. The next table lists occupational data for the state broken out by race and sex. The totals on these tables will not agree because Tables 25 and 26 included only those persons who were employed at the time the census was taken while the numbers on Table 27 also gave numbers for those persons who were unemployed but had listed their most recent occupation if they had worked in the previous five years.

* Because Hispanic is not a racial category it will not add into the total.

IDAHO DEPARTMENT OF EMPLOYMENT

Socio-Economic Characteristics

While this type of information is very useful to planners it is sometimes difficult to find and it is not always available on a current basis. The 1980 census is the most current source for much of these kinds of data. Included in this section is information on income, poverty, and welfare from various sources.

Income data is sometimes very difficult to find. Mean and median income for Idaho counties are given in Table 28; this is 1979 income from the 1980 census. Table 29 lists Idaho personal income by major sources from 1977 through 1981. Per capita income (Table 30) is given for 1976 through 1981 for all counties. Wages in Idaho (Table 31), like Table 23, p. 28, is compiled by the Department of Employment and is published on a quarterly and annual basis. The table shown here gives the annual wages by industry by county for 1981. Table 32 gives the average hourly salaries for all industries. This information is taken directly out of the Idaho Occupational Wage Survey, November 1982 which are the results of a yearly wage survey conducted by the Idaho Department of Employment.

The Economically Disadvantaged by Age by County (Table 35) are based on information provided by the U. S. Department of Labor from the 1980 census. The information in Tables 33 and 34 are the most current standards for poverty level and the 70 percent of Lower Living Standard Income Level for fiscal year 1983. Table 36 lists 1980 census data for persons below poverty by race by county. Because Idaho has such a small population, much of the racial data is suppressed.

The following tables provided by the Idaho Department of Health and Welfare show the February 1983 age and sex distribution for public assistance recipients and a December 1982 summary of public assistance payments by county by region and medical assistance by county and region for December 1982. There is also a table showing food stamp activity by county within region for November 1982.

The final table is this section shows civilian veterans in the state by period of service by county. This detailed information is also difficult to come by on a current basis.

TABLE 28

INCOME IN 1979 - IDAHO 1980 CENSUS

TABLE 33

POVERTY INCOME LEVEL FOR FY'83

Size of Family Unit	NON-FARM FAMILY 12 Month Maximum	FARM FAMILY 12 Month Maximum
1	$ 4,680	$ 4,010
2	6,220	5,310
3	7,760	6,610
4	9,300	7,910
5	10,840	9,210
6	12,380	10,510

For family units with more than six members, add $1,540 for each additional member in a non-farm family and $1,300 for each additional member in a farm family.

TABLE 34

70% OF LOWER LIVING STANDARD INCOME LEVEL FOR FY'83

The following table represents the 70 percent LLSIL based on family size variances:

Size of Family Unit	BALANCE OF STATE 12 Month Maximum	ADA COUNTY 12 Month Maximum
1	$(4,140)	$(4,099)
2	6,780	6,712
3	9,300	9,207
4	11,490	11,380
5	13,550	13,414
6	15,850	16,692

For family units larger than six persons, add $2,300 for each additional person of a Balance of State family and $2,280 for each additional person of an Ada County family.

ESARS

The last section is a copy of the latest (Fiscal Year 1982) Department of Employment ESARS Statewide report. ESARS stands for Employment Service Automated Reporting System. This report is a matrix of information concerning job applicants on file at local Idaho Job Service offices. Because the selection process is based simply on those members of the labor force who chose to list themselves at a Job Service office, the system is obviously not designed to be a representative sampling of the Idaho labor force. If this restriction is kept in mind, however, the level of detail in this matrix can be useful when trying to form an image of the Idaho labor pool. Table 43 gives some accumulated totals for FY'82 taken from ESARS Table 91.

One must understand that the data in the matrix (Table 44) are not accumulative totals but a record of those applicants on the master file on September 30, 1982. For example, if an applicant went from economically disadvantaged to nondisadvantaged before the September 30 cut-off date, he would not be counted in the Economically Disadvantaged category. Because a person's UI Claimant status or his economic status could change during the year, these two categories are likely to fluctuate from the yearly accumulated totals. Other categories such as Handicapped or Veteran status aren't as likely to change during the course of the year.

TABLE 43 ESARS

Applicants Active At Any Time FY'82
(October 1, 1981 - September 30, 1982)

Total Applicants	121,496
Handicapped	4,666
Veterans	19,457
Total UI Claimant	52,388
Economically Disadvantaged	17,675
Minority	9,050
Female	52,883
